Ceiling Square Diffuser - 3 Cone Fixed air pattern

Material: Stamped heavy gauge Steel.
Finish: Powder paint coating - white.
Air Pattern: Fixed horizontal 360° diffusion.
Mounting: Surface or Lay-in T-bar ceiling.
Core Removal: Unlock hanger brackets by swiveling lever down. Holding cone L at opposite sides, push upwards, then turn clockwise and drop core free from back plenum.

DF3

Optional fiberglass insulation on back panel, complies with A.S.T.M. E84 flame and smoke test. (Available only on models with 24" x 24" face)

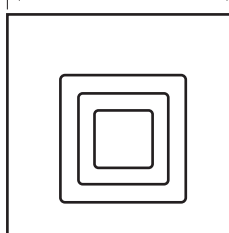

Round collar up to 14". Standard height is 1", other options available.

MODELS L100L & L150L LOSONE SELECT® IN-LINE VENTILATORS

Incredibly reliable. Unbelievably quiet. Offering the CFM choices you need at the lowest sound levels in the industry.

FEATURES

BLOWER:

- Low RPM for quiet operation
- Resilient anti-vibration mounts
- Dynamically-balanced, polymeric, centrifugal blower wheel for quiet, efficient performance
- Permanently lubricated, thermally protected motor
- Plug-in motor rated at 120 VAC
- Designed for continuous operation

HOUSING:

- Rugged, 20 gauge galvanized steel
- 6" (152.4 mm) round duct connectors
- May be installed in ceiling or wall (size permitting)
- 8-position mounting brackets for easy installation and greater adaptability to various mounting requirements
- Automatic back draft damper located within duct connector
- Factory-shipped in horizontal discharge position - easily converted to vertical discharge
- Removable panel allows easy access to the motor without disturbing ductwork
- Suitable for kitchen installations

CONTROLS:

- Model 59V (Ivory) / 59W (White) 60-Minute Time Control
- Model 61V (Ivory) / 61W (White) 15-Minute Time Control
- Model 72V (Ivory) / 72W (White) 6-Amp, Electronic Variable Speed Control

TYPICAL SPECIFICATION

Ventilator shall be Broan Model L100L or (L150L).

Ventilator shall have galvanized steel housing. Housing to have adjustable mounting brackets and removable panel to allow access to motor without disturbing ductwork.

Automatic back draft damper to be located within duct connector. Duct connector, blower assembly and wiring plate shall be adjustable for either horizontal or vertical installation.

Blower unit shall be removable from housing and will have a polymeric, dynamically balanced centrifugal-type blower wheel. Motor to be permanently lubricated and mounted with resilient anti-vibration mounts. RPM not to exceed number listed for each model.

Air delivery shall be no less and sound levels no greater than listed for each model. All air and sound ratings shall be certified by AMCA. Units to be UL and cUL listed.

"Broan-NuTone LLC certifies that the models shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 (and AMCA Publication 311 if sound is also certified) and comply with the requirements of the AMCA Certified Ratings Program"

Performance ratings include the effects of back draft damper in the air stream. Speed (RPM) shown is nominal. Performance is based on actual speed of test. The sound ratings shown are loudness values in fan sones at 5' (1.5m) in a hemispherical free field calculated per AMCA Std. 301. Values shown are for Installation Type D: Ducted inlet, Ducted outlet. Ratings do not include the effect of duct end correction. Performance ratings include the effects of 18 feet (5.6 m) of round inlet duct and, if needed, a rectangular to round duct transition in the air stream. Performance shown is for Installation Type D: Ducted inlet, Ducted outlet.

"Broan-NuTone LLC certifies that the models shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 (and AMCA Publication 311 if sound is also certified) and comply with the requirements of the AMCA Certified Ratings Program."

BACKWARD CURVED HIGH PRESSURE COMPOSITE FANS

MODEL: BCF

Overview

BCF

BCF Arrg. 1

BCF Impeller

The BCF is a backward curved industrial fan designed for handling particulate free, corrosive or caustic air in high pressure applications where conventional steel and stainless steel fans are not suitable.

Model BCF is designed so all parts exposed to the airstream are constructed of, or protected with, high-quality corrosion resistant materials to avoid material breakdown from most chemicals.

Model BCF features a wide impeller and housing, producing a high volume of air at a lower velocity, therefore the need for an expansion easé is eliminated.

Typical Applications Include

Fume Control, Fume Exhausting, Odor Control, Oil Mist Emissions, Pollution/Emissions Control, Process Control (Heating or Cooling), Scrubbers

Typical Industries Include

Fertilizer, Metal/Mineral Processing, Pulp and Paper, Petrochemical, Pharmaceutical, Water and Wastewater Treatment

Arrangements

Available in Arrangements 1, 8, 9, 9F and 10
Direct Drive & Belt Driven Configurations

Impeller Types

Backward Curved

Standard Construction

Class FS & CF

Optional Construction

ASTM D4167

Certifications

AMCA Sound/Air and FEG

Aerovent, a Twin City Fan Company, certifies that the BCF High Pressure Composite Fans shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and AMCA Publication 311 and comply with the AMCA Certified Ratings Program. See Catalog 411 for sound ratings.

For complete product performance, drawings and available accessories, download our Fan Selector program at aerovent.com.

Overview

BCF

The BCF industrial fan, with its patent-pending backward-curved impeller, is designed to provide long-lasting, efficient performance for corrosive applications.

Suitable for indoor and outdoor applications, the BCF is an ideal choice for applications in municipal and private sectors.

Sizes and Performance

- 16.5" to 60" impeller diameters
- Airflow to 151,000 CFM
- Static pressure to 34" w.g.
- Airstream temperature to 200° F

Impeller Designs

The BCF features a non-overloading impeller design suitable for applications requiring large volumes of air at moderate to high pressures. The high efficiency impeller features backward curved blades of single thickness affixed to the rim and back plate through a patent-pending three-way fastening design.

Four discrete impeller designs are available for the BCF product line. Two medium pressure impellers (M1 and M2) and two high pressure impellers (H1 and H2).

- Medium Pressure (M1 and M2) — for tip speeds to 24,500 FPM
- High Pressure (H1 and H2) — for tip speeds to 26,000 FPM

Fiberglass & Carbon Fiber Impeller Options

Impellers are available in fiberglass (Class FG) and carbon fiber (Class CF) construction. For other specific impeller materials of construction, please consult Aerovent for material suitability and compatibility to the airstream.

The composite impeller is constructed of a premium quality, corrosion resistant vinyl ester resin, reinforced with fiberglass or carbon fiber and other proprietary materials for minimal weight and optimum strength.

A conical shroud (rim) makes the BCF less susceptible to performance losses associated with poor inlet conditions. All steel hubs, shaft and stainless steel fasteners are encapsulated for corrosion resistance. All BCF impellers and shafts are statically and dynamically balanced as an assembly to grade G6.3 per ANSI S2.19 for smooth operation prior to assembly of the fan, followed by a final balance of the entire fan assembly.

Microchip Processing

AEROVENT 
INDUSTRIAL VENTILATION SYSTEMS

Wastewater Treatment

Housing

Housings are constructed of premium quality, fiberglass reinforced resin composite in a manner ensuring a smooth airpath surface. Coupled with aerodynamically designed inlet cones the BCF housings provide high efficiency and smooth airflow through the fan.

All housings utilize external, structural components for mounting. Mild steel structural components are mechanically fastened to the encapsulated hardware to prevent bleed-through corrosion. The mild steel bearing pedestal and non-airstream contact parts are epoxy coated for corrosion resistance. The exterior of the housing is coated with a UV resistant coating. Outlet flanges for duct connection and lifting lugs are standard.

Sizes 165 to 365 are field rotatable to one of five (5) discharge positions.

Fire Retardant Resin

Standard on the BCF, fire retardant resin reduces the resin's tendency to burn, attaining a flame spread rating of 25 or less in accordance with the ASTM E-84 testing method.

Shaft

Shafts are AISI 1045 hot-rolled steel accurately turned, ground, polished and ring-gauged for accuracy. Shaft areas exposed to the airstream are encapsulated to prevent corrosion. Shafts are generously sized for first critical speed of at least 1.43 times the maximum speed. Stainless steel shafts available.

Bearings

Bearings are heavy-duty, grease-lubricated, anti-friction ball or roller, self-aligning, pillow block type and are selected for minimum average bearing life (AFBMA L-50) in excess of 200,000 hours at the maximum fan RPM.

Shaft Sleeve

A fiberglass shaft sleeve encapsulates the standard mild steel shaft, protecting it from the airstream environment. The sleeve is bonded to the back plate of the impeller and extends through the opening of the housing. The fiberglass shaft sleeve is only available with standard shaft seal.

Round Inlet Collar

Fiberglass inlet collar (stub) for connecting to customer-supplied round duct or flexible inlet connector.

Shaft Seal

A shaft seal reduces leakage and protects the bearings from a contaminated airstream. Standard seals are constructed of Tetraglas compressed between an aluminum cover plate and the fan housing. The standard shaft seal is not gas tight. Special seals are available for low leakage applications requiring more protection.

Mechanical Run Test & Final Vibration Check

All fans are assembled for a mechanical run test as well as final balance prior to shipment. Vibration readings are taken on both fan bearings in the axial, horizontal and vertical directions at the specified speed. Fans are balanced to 0.15 in/sec. peak or less.

Spark Resistant Construction

Spark resistant construction for fiberglass fans is recommended when the fan is handling explosive fumes. Although fiberglass and carbon fiber are non-sparking materials, they can build and retain a static charge that can be potentially hazardous. With spark resistant construction, the fan is statically grounded by graphite impregnation to reduce a static charge buildup.

ASTM D4167 Construction

Fans constructed to meet ASTM D4167 include spark resistant construction, surface veil for the airstream and rotor assembly balanced to grade G6.3.

Special Width & Diameter Construction

Variations in impeller widths (70% to 100%) are available to match designed performance at motor speeds for the greatest efficiency for any given application.

Special Materials

Please contact the factory to ensure a suitable material is selected for the specific application.

Vinyl Ester — Provides increased corrosion resistance to stronger acids, chlorine and oxidizing agents. For use in industrial applications such as chemical and water treatment plants and commercial applications where urban or salt air corrosion exists.

Housing construction of vinyl ester is available as an option. Impeller is constructed of vinyl ester as standard.

Surface Veil — A single layer of synthetic veil on specific airstream parts is available to increased chemical resistance. A second layer is available if necessary for the application. Consult Aerovent for application information.

BCF Arrg. 9

AEROVENT 
INDUSTRIAL VENTILATION SYSTEMS

Installations

Paper Machine Exhaust

Scrubber Fan

Wastewater Treatment
Odor Control

Arrangement 1

Arrangement 1 fans are available in either direct drive (see Arrangement 8 below), or belt driven installations. The belt driven configuration allows the motor to be mounted in any of the four standard motor positions shown on page 7. The choice of a belt driven installation provides greater performance flexibility with the use of belts and sheaves of differing sizes.

Arrangement 8

Arrangement 8 fans use a fan shaft and motor direct coupled via a flexible coupling. The integral motor subbase is fabricated of heavy-gauge steel and securely reinforced for rigidity. Aerovent can supply impellers in a variety of diameters and differing widths to give the greatest efficiency for any given application. If desired, an Arrangement 1 fan can be set up for direct drive. This requires a concrete motor pedestal to be built in the field.

Arrangement 9

Arrangement 9 fans include a motor slide base mounted on the side of the motor pedestal. The motor and drive can be installed at the factory or field installed. Refer to dimensional data on pages 33-36 for maximum motor frame sizes on Arrangement 9 fans.

Unless otherwise specified, the motor will be installed on the left (L) side of the pedestal on CW fans and on the right (R) side on CCW fans.

Arrangement 9F

Arrangement 9F is available when an Arrangement 9 requires a motor which is too large to mount on the bearing pedestal. The fan frame is extended to accommodate the motor, for horizontal mounting, similar to an Arrangement 1 fan. Arrangement 9F is not suitable for mounting vibration isolators directly under the fan.

Unless otherwise specified, the motor will be installed on the left (L) side of the pedestal on CW fans and on the right (R) side on CCW fans. Arrangement 9F requires a separate subbase when vibration isolation is required.

Arrangement 10

Arrangement 10 fans are suitable for roof or outdoor installations. An optional weather cover, provides complete weather protection for motor, shaft, bearings and drives. This arrangement available on sizes up through 365. Refer to dimensional data on pages 41 and 42 for maximum motor frame sizes on Arrangement 10 fans.

CLOCKWISE (CW) - ROTATION & DISCHARGE (ROTATION VIEW FROM DRIVE SIDE)

COUNTER CLOCKWISE (CCW) - ROTATION & DISCHARGE (ROTATION VIEW FROM DRIVE SIDE)

Motor Positions

Arrangement 1

Arrangement 9

Arrangement 9F

- 1 Bolted Access Doors** Bolted access door allows for inspection and maintenance of internal fan components.
- 2 Unitary Base** A structural steel base provides common support to fan, motor and drive including guards. This style of base is designed for use without isolators and requires adequate foundation integrity for proper operation.
- 3 Inlet/Outlet Flange** Inlet and outlet flanges allow for duct mounting. Non-drilled outlet flanges are integrated into the housings as standard. Drilled bolt pattern is available. Inlet flange, drilled or undrilled, is bolted on in lieu of the standard inlet collar.
- 4 Shaft Guard (Exposed Bearings)** Shaft guard is designed to allow access to the bearings and protect personnel from the moving drive parts. A shaft guard with bearings fully guarded is also available.
- 5 Quick Access Belt Guard** Belt guard protects personnel from the moving drive parts. OSHA and quick access guards are available. Arrangement 10 offers a standard belt guard.
- 6 Shaft Seal, Double Lip-Type** A double lip shaft seal significantly reduces leakage of the contaminated airstream. The optional double-lip type shaft seal utilizes either Viton® (fluoroelastomer) or Teflon™ (fluoropolymer) seal element. The seal is positioned in fiberglass reinforced case and mounted to the housing. Double-lip shaft seals require a 316 stainless steel or Hastelloy® shaft sleeve or a solid 316 stainless steel shaft. Fiberglass shaft sleeves are not available for double-lip shaft seals. Consult Aerovent for shaft seal element chemical compatibility.
- 7 Housing Drain** A fiberglass drain coupling mounted to the lowest point of the housing allows drainage of condensate from fan housing.
- 8 Opposed Blade Outlet Damper** Outlet dampers add resistance to the fan by shifting the operating point to the left of the rating point. The horsepower savings depends on the relative position on the fan curve and is usually much less than other methods. Opposed blade dampers are recommended for systems where volume is modulated over the entire range. Opposed blade outlet dampers are available in epoxy coated mild steel or FRP.

1 Weather Cover An easily removable weather cover is available for Arrangement 10 fans. The weather cover provides complete protection for the motor, fan bearings and V-belt drive.

2 Extended Lube Lines Allow for easy lubrication of bearings on belt driven units without disassembly by extending polyethylene lines from fan bearings to exterior of base.

3 Isolation Base w/ Spring Isolator A structural steel base minimize the transmission of sound vibration from the fan to the building structure and provides common support to fan, motor and drive including guards. This style of base is designed for use with isolators and requires adequate foundation integrity for proper operation.

Other Options/Accessories Include:

- Detached Inlet Box
- Inlet Box Drain
- Inlet Box Access Door
- Inertia Base
- Parallel-Blade Outlet Damper
- Extended Life Bearings
- Shaft/Bearing Guard
- 316 Stainless Steel Shaft (No Sleeve)
- Stainless Steel Nameplate

Class FG (Fiberglass Impeller)

Class CF (Carbon Fiber Impeller)

NOTES:

- Performance certified is for installation Type B: Free inlet, Ducted outlet.
- Power rating (BHP) does not include transmission losses.
- Performance ratings do not include the effects of appurtenances (accessories).
- Underlined values indicate maximum static efficiency.

Class FG (Fiberglass Impeller)

Class CF (Carbon Fiber Impeller)

NOTES:

- Performance certified is for installation Type B: Free inlet, Ducted outlet.
- Power rating (BHP) does not include transmission losses.
- Performance ratings do not include the effects of appurtenances (accessories).
- Underlined values indicate maximum static efficiency.

Class FG (Fiberglass Impeller)

Class CF (Carbon Fiber Impeller)

NOTES:

- Performance certified is for installation Type B: Free inlet, Ducted outlet.
- Power rating (BHP) does not include transmission losses.
- Performance ratings do not include the effects of appurtenances (accessories).
- Underlined values indicate maximum static efficiency.

Arr. 1 M1/M2, Sizes 165 - 365 Rotatable

Notes:

1. Outlet flanges are included on all discharges. Drilling is optional.
2. CW rotation is shown, CCW rotation is similar but opposite.
3. All units are rotatable to all positions shown using centerline height Dimension D, except sizes 300-365. Use Dimension DG for 300-365 when BHD discharge is required, otherwise Dimension D will be supplied.

Arr. 1 H1/H2, Sizes 165 - 365 Rotatable

Notes:

1. Outlet flanges are included on all discharges. Drilling is optional.
2. CW rotation is shown, CCW rotation is similar but opposite.
3. All units are rotatable to all positions shown using centerline height Dimension D, except sizes 300-365. Use Dimension DG for 300-365 when BHD discharge is required, otherwise Dimension D will be supplied.

Arr. 9F M1/M2, Sizes 165 - 365 Rotatable

Notes:

- Outlet flanges are included on all discharges. Drilling is optional.
- CW rotation is shown, CCW rotation is similar but opposite.
- All units are rotatable to all positions shown using centerline height Dimension D, except sizes 300-365. Use Dimension DG for 300-365 when BHD discharge is required, otherwise Dimension D will be supplied.
- Standard Arr. 9F motor location is on the left for CW rotation and on the right for CCW rotation (unless otherwise specified). Dimension FR is maximum motor frame.

Arr. 9F H1/H2, Sizes 402 - 600 Non-Rotatable

Notes:

1. Outlet flanges are included on all discharges. Drilling is optional.
2. CW rotation is shown, CCW rotation is similar but opposite.
3. Standard Arr. 9F motor location is on the left for CW rotation and on the right for CCW rotation (unless otherwise specified). Dimension FR is maximum motor frame.

Arr. 10 M1/M2, Sizes 165 - 365 Rotatable

Notes:

1. Outlet flanges are included on all discharges. Drilling is optional.
2. CW rotation is shown, CCW rotation is similar but opposite.
3. All units are rotatable to all positions shown using centerline height Dimension D, except sizes 300-365. Use Dimension DG for 300-365 when BHD discharge is required, otherwise Dimension D will be supplied.
4. Dimension FR is maximum motor frame.

R-1004881-A

Model

BCF

Fans shall be Model BCF, Backward Curved High Pressure Composite Blowers, as manufactured by Aerovent, Minneapolis, Minnesota.

PERFORMANCE — Performance ratings shall conform to AMCA Standard 205 (fan efficiency grade), 211 (air performance) and 311 (sound performance). Fans shall be tested in accordance with ANSI/AMCA Standard 210 (air performance) and 300 (sound performance) in an AMCA accredited laboratory. Fans shall be licensed to bear the AMCA certified ratings seal for both air and sound, and fan efficiency grade (FEG).

Fans shall have a sharply rising pressure characteristic extending through the operating range and continuing to rise beyond the peak efficiency to ensure quiet and stable operation. Fans shall have a non-overloading design with selflimiting horsepower characteristics and shall reach a peak in the normal selection area.

CONSTRUCTION — Fan housing shall be constructed of a general-purpose fire-retardant polyester resin with ASTME-84 Class 1 flame spread of <25. Housing may be constructed with a fire-retardant vinyl ester resin if required by the application. Airstream surfaces shall be free from imperfections and irregularities to minimize airflow resistance and to prevent contamination build-up. Discharge flanges shall be provided for rigidity and duct connection. Housings shall be suitably braced to prevent distortion and vibration. Shaft hole openings sealed to minimize leakage. Inlet of housing shall be adequately sized to allow for impeller removal. All units are furnished with lifting lugs.

IMPELLER — BCF backward curved impellers shall be single thickness, designed for maximum efficiency and quiet operation. Impeller shall be fabricated of a fire-retardant vinyl ester resin. Blades shall be continuously-bonded to the rim and back plate. Impeller hub shall be completely encapsulated to insure corrosion protection. All impellers shall be statically and dynamically balanced.

SHAFT — Shafts shall be AISI 1018, 1040 or 1045 hot rolled steel, accurately turned, ground, polished and ring-gauged for accuracy. Shafts shall be encased in a sleeve securely fixed and bonded to the impeller back plate. The sleeve shall extend out through the housing shaft hole for corrosion protection. Shafts shall be sized for the first critical speed of at least 1.43 times the maximum speed.

BEARINGS — Bearings shall be heavy-duty, grease lubricated, anti-friction ball or roller, self-aligning, pillow block type and selected for a minimum average bearing life (AFBMA L-50) in excess of 200,000 hours at the maximum fan RPM.

DRIVE — Motor sheaves shall be cast iron, variable pitch on applications 20 HP and smaller, and fixed pitch on 25 HP and larger. Drives and belts shall be located external to the fan casing and rated for 150% of the required motor HP.

FINISH AND COATING — Exposed steel components excluding the shaft, shall be thoroughly degreased and deburred before application of a rust-preventative primer. After the steel structure is completely assembled, a finish coat of epoxy shall be applied to the entire assembly. The exposed portion of the fan shaft shall be coated with a petroleum-based rust protectant. The housing shall be coated with a suitable coating.

ACCESSORIES — When specified, accessories such as shaft seals, access doors, drains, inlet flanges, belt guards, shaft and bearing guards, outlet dampers, inlet boxes shall be provided by Aerovent to maintain onesource responsibility.

FACTORY RUN TEST — All fans prior to shipment shall be completely assembled and test run as a unit at the specified operating speed or maximum RPM allowed. Each impeller shall be statically and dynamically balanced in accordance with ANSI/AMCA 204-96 "Balance Quality and Vibration Levels for Fans" to Fan Application Category BV-3, Balance Quality Grade G6.3. Balance readings shall be taken by electronic type equipment in the axial, vertical and horizontal directions on each of the bearings. Records shall be maintained and a written copy shall be available upon request.

GUARANTEE — The manufacturer shall guarantee the workmanship and materials for at least one (1) year from startup or eighteen (18) months from shipment, whichever occurs first.

<i>Fire Dampers</i>							
QTY	Tag	Size	V/H	Dynamic/Static	Material	Part Number	Manufacturer
3	FD	8x6	Vertical	Dynamic	Steel	D120	Nailor
1	FD	8x8	Horizontal	Dynamic	Stainless Steel	D120SS	Nailor

DYNAMIC CURTAIN TYPE FIRE DAMPER
1 1/2 HR. LABEL • VERT. OR HORIZ.
FOR USE IN DYNAMIC OR STATIC SYSTEMS
MODEL: D0120 (TYPE B)

QUALIFICATIONS:

- **UL 555 & CAN/ULC-S112 CLASSIFIED DYNAMIC FIRE DAMPER.**
1 1/2 hr. label (File # R9492).
- **Meets all the requirements of UL and NFPA 80, 90A and 101 for fire dampers in dynamic HVAC systems, as well as IBC and NBC (Canada) Building Code requirements.**
- **City of New York Board of Standards and Appeals. Cal. No. 460-88-SA.**
- **California State Fire Marshal: Fire Damper Listing No. 3225-0935:0113.**
- **Maximum velocity: 4000 fpm @ 4" w.g. (20 m/s @ 1 kPa).**

Model D0120 curtain fire damper is UL approved for use where local building codes require the protection of HVAC ductwork penetrations in walls, partitions or floors that have a fire resistance rating of up to 2 hours. The D0120 is classified for use in dynamic "fans on" systems where the HVAC system remains operative in the event of a fire. Damper closure under airflow is assured. Type B fire dampers place the curtain blade pack out of the airstream for higher free area and reduced pressure drop.

STANDARD CONSTRUCTION:

- Frame:** 4 1/4" (108) wide, 22 ga. (0.85) roll-formed G60 galvanized steel.
- Blades:** Curtain type interlocking blades, 22 ga. (0.85) roll-formed G60 galvanized steel.
- Enclosure:** 22 ga. (0.85) galvanized steel.
- Fusible Link:** 165°F (74°C) standard. UL Listed. 212°F (100°C) available.
- Blade Closure:** Stainless steel closure springs and galvanized steel locking ramps.

Sizes (Duct W x H):

Velocity/ Pressure Rating	Single Section				Multiple Section	
	Minimum		Maximum		Maximum	
	Vertical	Horizontal	Vertical	Horizontal	Vertical	Horizontal
24	6" x 4" (152 x 102)	6" x 4" (152 x 102)	36" x 32" (914 x 813)	24" x 21" (610 x 533)	① 72" x 21" or 36" x 45" (1829 x 533 or 914 x 1143)	—
34, 44	6" x 4" (152 x 102)	—	24" x 21" (610 x 533)	—	—	—

① Individual sections of multiple section assembly not to exceed 24" (610) in width, up to 48" (1219) wide. Assemblies larger than 48" (1219) in width will be made up of individual sections not to exceed 18" (457) wide.

OPTIONS:

- ☐ Non-standard temperature fusible link. Specify _____.
- ☐ Factory Sleeve. Available in 10 (3.5) through 22 ga. (0.85) galvanized steel and in lengths required for application.
Specify: _____ length. _____ ga.
- ☐ **PT Pull Tab Release.** Permits simple reset of horizontal damper when access door is located below damper. (See dwg. ACC-PTR for details).

DYNAMIC VELOCITY/PRESSURE RATING:

- ☐ **24** 2000 fpm @ 4" w.g. (Standard)
- ☐ **34** 3000 fpm @ 4" w.g. } (Optional)
- ☐ **44** 4000 fpm @ 4" w.g. }

VERTICAL MOUNT

HORIZONTAL MOUNT

NOTES:

1. See sizing chart for relationship of duct size and damper size. Refer to drawing D0100-MSSC.
